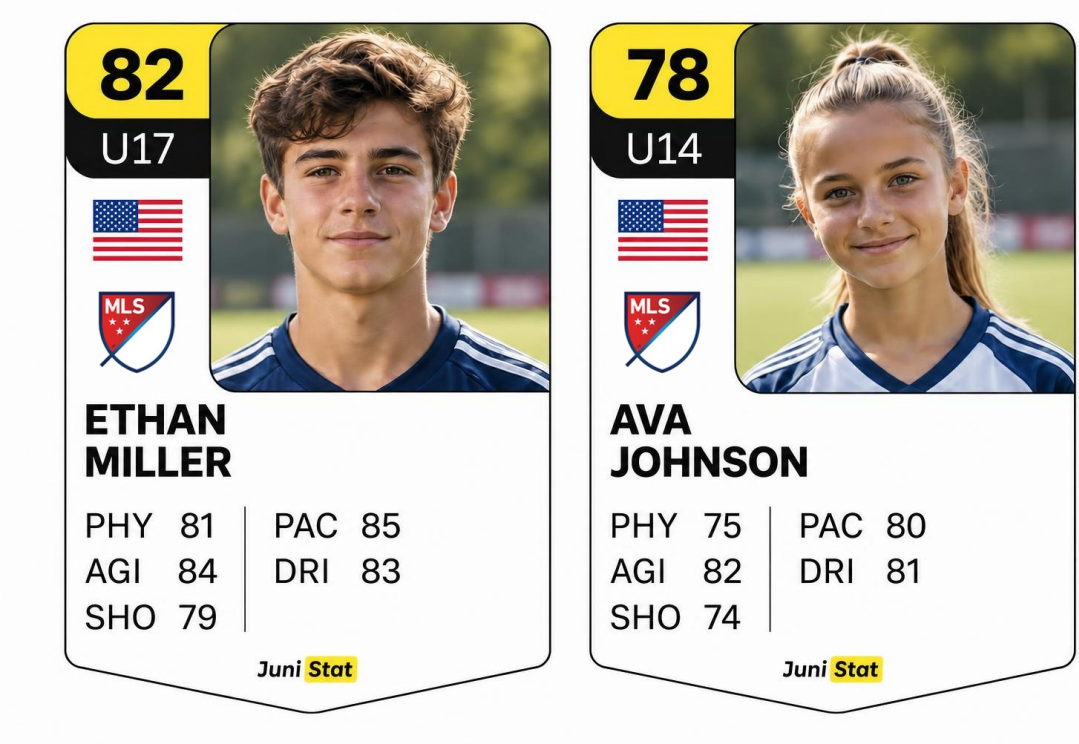
Performance tracking. Recruitment. Scouting.

Regular AI-scored soccer tests. Clearer progress for families. Better evidence for coaches and scouts.



Illustrative American profiles: Ethan Miller U17 and Ava Johnson U14. MLS crests illustrate a proposed design, not affiliation or real MLS NEXT player data. Girls' profiles illustrate wider academy use.

One player. One year. Unlimited access.

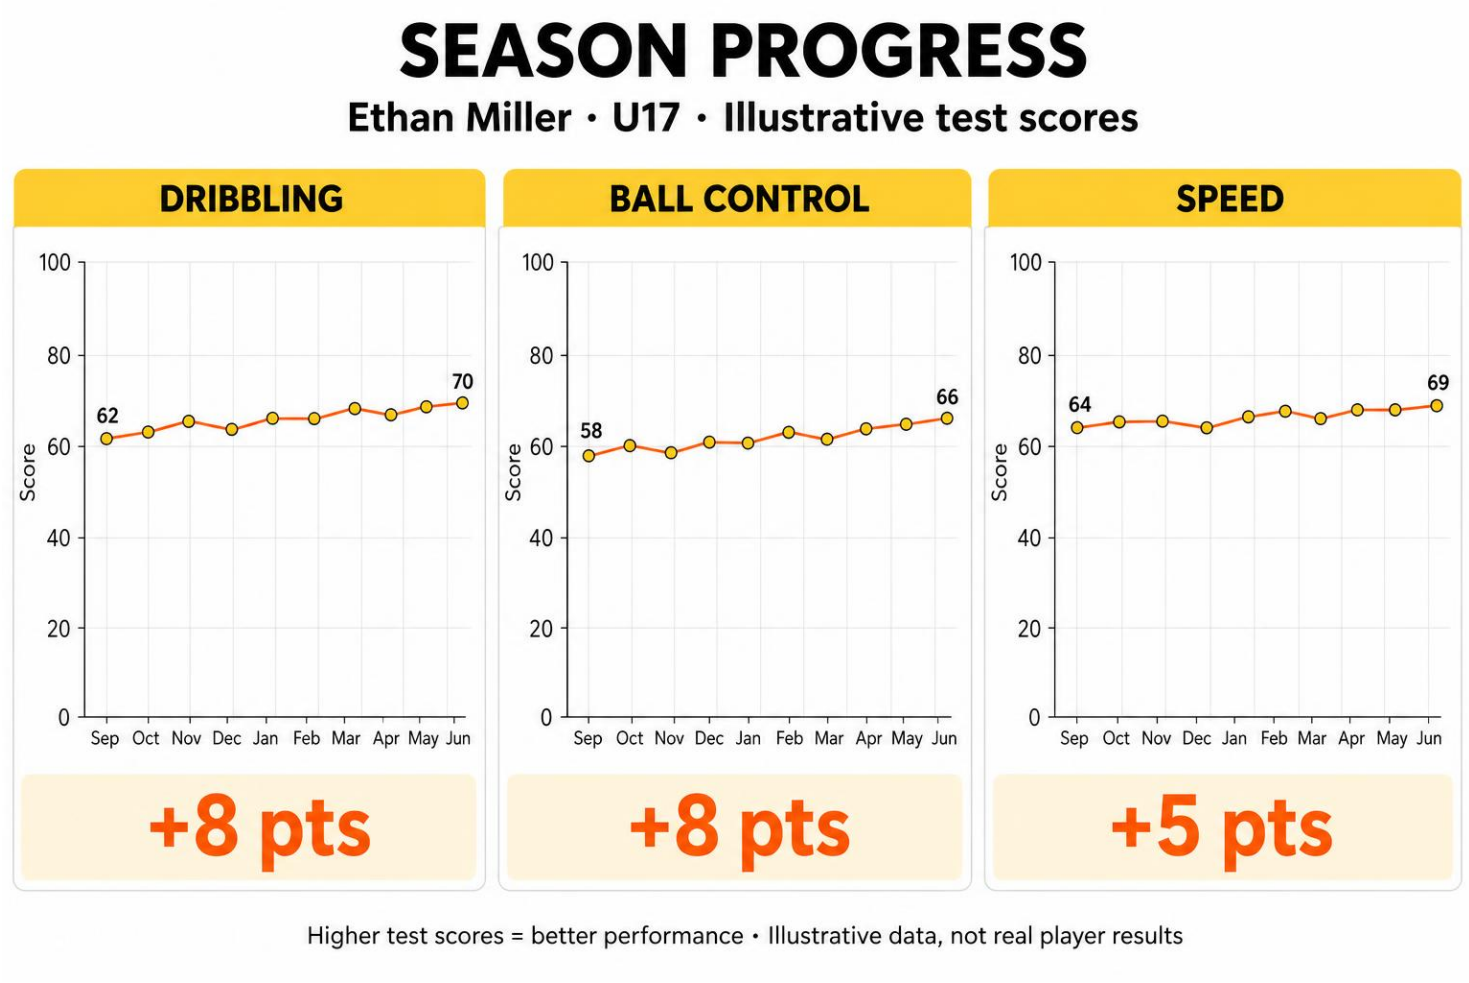
Academy annual cost	Suggested family price	Gross difference
US$49	**From US$99**	**US$50**

Unlimited JuniStat testing and JuniCoach performance tracking per licensed player. The academy sets the family price and retains the difference before taxes and academy delivery costs; this is not net profit. Proposed terms require agreement.

Start with one academy

Apply at junicoach.app/mlsnext to agree a pilot squad, testing checkpoints, family reports and scouting review.

From test results to a development story.



How it works

1. Record 14 physical and technical tests using one smartphone, a tripod, markers and a measuring tape, following the JuniStat app instructions.
2. Review player cards and squad results in JuniCoach. Compare age-group results in JuniStat's database of more than 200,000 young players worldwide.
3. Repeat the same protocol during the season. Share progress with families and add test evidence to observation, match video and college recruiting conversations.

Private data. Practical integration.

Limit player-data access to authorized staff and share with appropriate permission. Agree guardian consent, data-processing terms, retention and deletion rules, and applicable U.S. youth-privacy requirements before the pilot. Integration with MLS's digital ecosystem would be scoped jointly; no live integration or certification is claimed.

Independent proposal, not affiliated with or endorsed by MLS or MLS NEXT. Tests support—not replace—coaches and scouts. No score guarantees selection or a scholarship.
